

The Social Navigation System

Subtitle: Conversation Scripts & Friendship Frameworks for Neurodivergent Kids

Theme: Decoding the hidden rules of connection, conflict, and community.

START HERE — PICK YOUR SOCIAL BOTTLENECK

Social skills aren't one big blob. Identify the specific barrier holding them back.

If they play alongside kids but don't connect:

- **Use Tool #1:** The "Interest Detective" Mission
- **Use Tool #2:** The "Watch, Wait, Enter" Framework
- **Use Tool #7:** The Parallel Play Explainer (for parents)

If they dominate conversations or "Info-Dump":

- **Use Tool #4:** The Conversation Ping-Pong Coach
- **Use Tool #18:** The "Traffic Light" Monologue Checker
- **Use Tool #27:** The "Trust Circle" Framework

If they fight constantly or can't handle losing:

- **Use Tool #9:** The "Game Tape" Review
- **Use Tool #12:** The "Mean vs. Joking" Decoder
- **Use Tool #44:** The "Good Game" Protocol

If they are bullied or too passive:

- **Use Tool #5:** The "Friend Radar" (Safe vs. Unsafe)
- **Use Tool #11:** The "Grey Rock" Method
- **Use Tool #13:** The Assertiveness Script

Section 1: Friendship Building (The Entry)

Moving from "parallel play" to connection.

1. The "Interest Detective" Mission

Best Used When

Your child only talks about *their* interests (trains/Minecraft) and ignores what the other child likes.

What This Helps With

- Finding common ground
- Reciprocity
- Expanding conversation topics

Plaintext

My child loves [Interest] but struggles to talk about anything else. Create a "Detective Mission" game. Give me 3 questions they can ask a potential friend to "investigate" what *that* child likes, and a script for how to connect their interest to the new friend's interest (finding the bridge).

Parent Note: *Friendship isn't just about sharing space; it's about sharing worlds.*

2. The "Watch, Wait, Enter" Framework

Best Used When

Your child hovers on the edge of a game, wanting to join but not knowing how to break in.

What This Helps With

- Reducing social anxiety
- Social timing

- Avoiding rejection

Plaintext

My child doesn't know how to join a group that is already playing. Teach me the "Watch, Wait, Enter" method. Give me a specific script they can use to ask to join (e.g., "Can I be the [Role]?") that fits into the flow of the game rather than stopping it.

Parent Note: *Entering a game is like merging onto a highway; you have to match the speed of the traffic.*

3. The Playdate Architect Tool

Best Used When

Unstructured playdates usually end in disaster or boredom.

What This Helps With

- Reducing chaos
- Managing expectations
- Ensuring success

Plaintext

I am planning a playdate for my [Age] year old. We need structure. Suggest a 2-hour "Playdate Schedule" that alternates between high-energy play and low-energy parallel activity. Suggest 3 activities that require collaboration (building something together) rather than competition.

Parent Note: *Structure is the trellis that lets the friendship vine grow.*

4. The Conversation Ping-Pong Coach

Best Used When

Conversations feel like a monologue or an interview, rather than a back-and-forth.

What This Helps With

- Reciprocity
- Active listening
- Flow

Plaintext

Explain the concept of "Conversation Ping-Pong" to a child. Create a visual or game we can practice at dinner where we have to "hit the ball back" (ask a question or make a related comment) to keep the rally going.

Parent Note: *A conversation is a catch, not a lecture.*

5. The "Friend Radar" (Safe vs Unsafe)

Best Used When

Your child keeps trying to befriend kids who aren't interested or are unkind.

What This Helps With

- Identifying safe people
- Reading social cues
- Self-protection

Plaintext

My child struggles to identify who is a potential friend vs. who is just a classmate. Help us create a "Friend Radar" checklist. List 5 signs that someone is open to friendship (e.g., smiles, asks you questions) and 5 signs they are not interested (e.g., turns away, one-word answers).

Parent Note: *Teach them to go where they are celebrated, not just tolerated.*

6. The Low-Stakes Invite Script

Best Used When

Your child is terrified of rejection and won't ask anyone to hang out.

What This Helps With

- Building confidence
- Reducing pressure
- Testing the waters

Plaintext

My child wants to ask a friend to hang out but is scared of hearing "no." Give me a script for a "Low-Stakes Invite" that is casual and easy (e.g., "I'm going to the park, want to come?" vs "Will you play with me?"). Include a script for how to react coolly if the answer is no.

Parent Note: *A 'no' isn't a rejection of them; it's just a mismatch of schedules.*

7. The Parallel Play Explainer

Best Used When

Your child prefers playing *near* friends rather than *with* them, and other parents think it's weird.

What This Helps With

- Validating neurodivergent social styles
- Managing expectations

- Advocacy

Plaintext

My child enjoys "Parallel Play" (gaming side-by-side but not interacting). Explain to me why this is a valid form of connection for neurodivergent kids so I can explain it to other parents without apologizing for it.

Parent Note: *Shared silence is a love language too.*

8. The Graceful Exit Strategy

Best Used When

Playdates end in tears because your child doesn't want the friend to leave.

What This Helps With

- Transitions
- Ending on a high note
- Host etiquette

Plaintext

We struggle with the end of playdates. Give me a "Goodbye Ritual" checklist. It should include a 10-minute warning, a specific "last thing" to do, and a script for walking the friend to the door to say goodbye properly.

Parent Note: *The last 5 minutes of the playdate is what they remember most.*

Section 2: Conflict Resolution (The Repair)

Navigating the inevitable bumps in the road.

9. The "Game Tape" Review

Best Used When

Your child had a fight with a friend and insists "It wasn't my fault!"

What This Helps With

- Objective analysis
- Reducing defensiveness
- Problem solving

Plaintext

My child got into a fight with a friend. Act as a sportscaster reviewing the "Game Tape." Help me ask neutral questions to reconstruct the timeline (What happened first? Then what?) without assigning blame, so we can figure out where the miscommunication happened.

Parent Note: *Blame is a dead end. Curiosity is a path forward.*

10. The Impact vs. Intent Apology

Best Used When

Your child hurt someone's feelings but refuses to apologize because "I didn't mean to!"

What This Helps With

- Empathy
- Accountability
- Repairing relationships

Plaintext

My child refuses to apologize because it was an accident. Help me explain the difference between "Intent" (what you meant to do) and "Impact" (what actually happened). Give me a script for an apology that acknowledges the hurt without admitting to malice.

Parent Note: *If you step on someone's foot, you say sorry—even if you didn't mean to step on it.*

11. The "Grey Rock" Method

Best Used When

Your child is being teased or baited by a bully/mean peer.

What This Helps With

- Bully-proofing
- Emotional regulation
- De-escalation

Plaintext

My child is being teased by a peer who wants a reaction. Teach them the "Grey Rock" or "Bored Rock" method. Give me a script and body language cues (shrug, look away) to become uninteresting to the bully.

Parent Note: *Bullies feed on reactions. Starve them.*

12. The "Mean vs. Joking" Decoder

Best Used When

Your child takes everything literally and gets upset by friendly banter.

What This Helps With

- Understanding nuance
- Reducing conflict
- Resilience

Plaintext

My child struggles to tell the difference between "friendly teasing" and "mean bullying." Create a checklist of clues (tone of voice, facial expression, relationship history) to help them decide if the intent was playful or hurtful.

Parent Note: *Context is the invisible ink of conversation.*

13. The Assertiveness Script

Best Used When

Your child is a doormat and lets friends boss them around to keep the peace.

What This Helps With

- Boundaries
- Self-respect
- Healthy relationships

Plaintext

My child is too passive and agrees to everything the friend wants. Give me 3 "Assertiveness Scripts" they can practice to politely say no or suggest a different idea (e.g., "I don't want to play that, let's play X instead").

Parent Note: *A friend who only likes you when you obey isn't a friend; they're a dictator.*

14. The "Olive Branch" Text

Best Used When

There has been a falling out, and your child wants to fix it but doesn't know how to reach out.

What This Helps With

- Repair
- Humility
- Reconnection

Plaintext

My child wants to make up with a friend after a fight. Draft a short, low-pressure text message they can send that breaks the ice without being overly dramatic (e.g., sending a funny meme or a simple "Are we cool?").

Parent Note: *It takes courage to be the first one to reach out.*

15. The Friendship Repair Letter

Best Used When

The conflict is too big for a text, and feelings were deeply hurt.

What This Helps With

- Processing emotions
- Articulating feelings
- Sincere apology

Plaintext

Help my child write a "Repair Letter" to their friend. The structure should be: 1. I'm sorry for [Specific Action]. 2. I felt [Emotion]. 3. Your friendship is important to me because [Reason]. 4. Can we start over?

Parent Note: *Writing slows down the reactive brain and lets the reflective brain speak.*

16. The "Different Worlds" Explainer

Best Used When

Your child thinks their friend is "wrong" for liking different things or playing by different rules.

What This Helps With

- Flexible thinking
- Tolerance
- Theory of Mind

Plaintext

My child is upset because their friend plays the game "wrong" (differently). Help me explain that "Different isn't wrong." Give me a metaphor about how different houses have different rules, and that's okay.

Parent Note: *Being right is lonely. Being flexible is connecting.*

Section 3: Perspective Taking (The Lens)

Learning to see through someone else's eyes.

17. The "Thought Bubble" Practice

Best Used When

Your child dominates the conversation or action without noticing others are bored.

What This Helps With

- Theory of Mind
- Reading the room
- Empathy

Plaintext

We are watching a movie/show. Pause it at an emotional scene. Give me a prompt to ask my child: "If we put a thought bubble over [Character's] head right now, what would it say?" to practice reading facial expressions and context.

Parent Note: *Reading minds is a skill, not magic. It takes practice.*

18. The "Traffic Light" Monologue Checker

Best Used When

Your child "info-dumps" for 20 minutes without taking a breath.

What This Helps With

- Self-monitoring
- Conversation flow
- Respecting the listener

Plaintext

My child "info-dumps" about their passion. Teach us the "Traffic Light" system for conversation. Green = They are asking questions/looking interested (Keep going). Yellow = They are looking away/shifting (Wrap it up). Red = They are checking a watch/sighing (Stop and ask a question).

Parent Note: *Sharing your passion is a gift, but check to see if the recipient has their hands full.*

19. The "Room Reader" Scanner

Best Used When

Your child walks into a quiet library shouting, or laughs at a funeral.

What This Helps With

- Context blindness
- Situational awareness
- Social regulation

Plaintext

My child struggles to "Read the Room." Create a game called "Scene Scanner." Before we enter a new place, we stop and ask: "What is the energy level here? (1-10) What are other people doing?" so they can match their energy to the environment.

Parent Note: *Matching the energy isn't about hiding; it's about harmonizing.*

20. The Empathy Bridge

Best Used When

Your child dismisses someone else's feelings because "That's a stupid reason to cry."

What This Helps With

- Validating others
- Intellectual vs. Emotional empathy
- Kindness

Plaintext

My child thinks their friend's reaction is illogical. Help me explain that "Feelings don't have to make sense to be real." Give me a script to help them validate the friend ("I see you are sad") even if they don't understand *why*.

Parent Note: *You don't have to agree with the feeling to respect it.*

21. The "Reverse Roleplay"

Best Used When

There is a conflict and your child cannot understand the other side.

What This Helps With

- Perspective shifting
- Reducing rigidity
- Conflict resolution

Plaintext

We are stuck in a conflict. Help us run a "Reverse Roleplay." Ask my child to act as the *other person* and argue their case. "I am [Friend's Name] and I am mad because..."

Parent Note: *Standing in someone else's shoes is the fastest way to end a fight.*

22. The Sarcasm Detector

Best Used When

Your child takes "Great job!" literally when they just spilled milk.

What This Helps With

- Understanding non-literal language
- Reducing confusion
- Social defense

Plaintext

My child doesn't understand sarcasm. Explain the concept of "Tone Mismatch" (when the words are nice but the voice is mean/flat). Give us 3 examples to practice identifying sarcasm vs. sincerity.

Parent Note: *Sarcasm is a second language. Some kids need a dictionary.*

23. The "Hidden Rules" Detective

Best Used When

Your child breaks unwritten social rules (e.g., cutting in line, critiquing a gift).

What This Helps With

- Explicit instruction
- Decoding norms
- Social survival

Plaintext

My child keeps breaking "Hidden Social Rules" (like telling someone their haircut is bad). Help us turn this into a science project. "Let's discover the hidden rule about [Situation]." Frame it as decoding a secret alien manual.

Parent Note: *To them, these rules aren't obvious—they are invisible tripwires.*

24. The Fact vs. Opinion Sorter

Best Used When

Your child corrects people aggressively because "Star Wars is better than Star Trek, that's a fact!"

What This Helps With

- Tolerance
- Conversational flexibility
- Reducing arguments

Plaintext

My child corrects people constantly. Help me explain the difference between a FACT (The sun is hot) and an OPINION (Pizza is delicious). Give me a script for them to say "I disagree, but that's cool" instead of "You're wrong."

Parent Note: *You can be right, or you can be related. Sometimes you have to choose.*

Section 4: Hidden Social Rules (The Manual)

Decoding the "Secret Manual" of society.

25. The "Polite Lie" Explainer

Best Used When

Your child tells Grandma her cooking is "dry" because they value honesty above all.

What This Helps With

- Social lubrication
- Kindness vs. Honesty
- Gift etiquette

Plaintext

My child is radically honest to a fault. Help me explain the concept of a "Social White Lie" or "Protection Filter." Use the example of receiving a gift they don't like. Script: "Thank you for thinking of me" (which is true) instead of "I hate this" (which hurts).

Parent Note: *Honesty without kindness is brutality.*

26. The Space Bubble Visualizer

Best Used When

Your child stands too close or touches people without asking.

What This Helps With

- Personal space
- Boundaries
- Physical regulation

Plaintext

My child is a "close talker." Help me teach the "Hula Hoop" or "Space Bubble" concept. Give me a gentle verbal cue I can use in public (like "Check your bubble") to remind them to step back without shaming them.

Parent Note: *Respecting space is the first step in respecting the person.*

27. The "Trust Circle" (Oversharing)

Best Used When

Your child tells the grocery store clerk about your divorce or their medical issues.

What This Helps With

- Privacy
- Safety
- Social hierarchy

Plaintext

My child overshares personal info with strangers. Describe the "Circle of Trust" concept (Inner circle = family, Middle = friends, Outer = strangers). Help me list 3 topics that stay in the Inner Circle.

Parent Note: *Not everyone has earned the right to hear their story.*

28. The Hygiene/Social Smell Talk

Best Used When

Your tween/teen refuses to shower, and it's starting to affect them socially.

What This Helps With

- Self-care

- Social impact
- Puberty navigation

Plaintext

I need to talk to my child about body odor and hygiene without shaming them. Script a conversation that frames hygiene as "Social Consideration" (like wearing headphones for loud music) rather than just "You smell."

Parent Note: *Hygiene is part of the uniform for the social team.*

29. The "Sharing the Stage" Metaphor

Best Used When

Your child always has to be the leader, the main character, or the winner.

What This Helps With

- Cooperation
- Humility
- Group dynamics

Plaintext

My child bosses everyone around. Use a "Theater/Stage" metaphor. Explain that sometimes they are the Lead Actor, but sometimes they need to be the Supporting Actor or the Audience. If they are always the Lead, the other actors will quit.

Parent Note: *A leader without followers is just a guy taking a walk.*

30. The "Tattling vs. Telling" Scale

Best Used When

Your child reports every minor infraction to the teacher.

What This Helps With

- Social standing
- Problem solving
- Teacher sanity

Plaintext

My child is being labeled a "tattle-tale." Explain the "Danger Scale." If it's Dangerous (someone could get hurt) = Tell. If it's Annoying (someone broke a rule but everyone is safe) = Ignore/Handle it yourself.

Parent Note: *Nobody likes the self-appointed police officer.*

31. The "Pause Button" Practice (Interrupting)

Best Used When

Your child interrupts constantly because "I'll forget if I don't say it now!"

What This Helps With

- Impulse control
- Conversation flow
- Respect

Plaintext

My child interrupts constantly. Give me a strategy (like putting a hand on my arm) to hold the thought physically. Also, give me a script to reassure them: "I will listen to you as soon as I finish this sentence. Squeeze my arm so I know you're waiting."

Parent Note: *Interrupting says 'My thought is more important than yours.'*
Waiting says 'I value you.'

32. The Good Guest Protocol

Best Used When

Your child goes to someone's house and criticizes the food or rummages through drawers.

What This Helps With

- Manners
- Respecting boundaries
- Being invited back

Plaintext

My child is going to a friend's house. Create a "Good Guest Code of Conduct" with 4 simple rules (e.g., Eat what is served/Say no thank you politely, Ask before touching, Follow the host's lead).

Parent Note: *Being a good guest ensures a return ticket.*

33. The Code Switching Explainer

Best Used When

Your child talks to the principal the same way they talk to their gaming buddies (slang, cursing).

What This Helps With

- Context awareness
- Professionalism
- Social success

Plaintext

Explain "Code Switching" to my child. Compare it to wearing different outfits. You wear a swimsuit to the pool and a uniform to school. Language is the same. List "Formal Words" vs. "Friend Words."

Parent Note: *Language is clothing for our thoughts. Dress for the occasion.*

Section 5: Social Anxiety & Avoidance (The Courage)

Helping the cautious child step into the world.

34. The "Social Battery" Plan

Best Used When

Your child crashes or melts down after parties.

What This Helps With

- Energy management
- Self-advocacy
- Preventing burnout

Plaintext

My child gets exhausted by socializing. Help us create a "Social Battery" management plan for an upcoming party. 1. Pre-charge (quiet time before). 2. Power Save Mode (step outside for 5 mins during). 3. Recharge (specific activity after).

Parent Note: *Introversion isn't a flaw; it's just a different engine type.*

35. The "Scout Mode" Entry

Best Used When

Your child is terrified to walk into a loud, crowded room.

What This Helps With

- Reducing anxiety
- Orientation
- Feeling safe

Plaintext

My child is anxious about entering a birthday party. Suggest a "Scout Mission" where we arrive early or stand on the periphery first to map the room (Where is the bathroom? Where is the quiet spot? Who do I know?) before joining the chaos.

Parent Note: *Observation is participation.*

36. The Invisible Cloak Reality Check

Best Used When

Your child thinks everyone is staring at them (Spotlight Effect).

What This Helps With

- Reducing self-consciousness
- Reality testing
- Anxiety relief

Plaintext

My child won't dance/eat in public because "everyone is watching." Explain the "Spotlight Effect" (the psychological fact that people are mostly paying attention to themselves). Give a fun experiment to prove it (e.g., wear mismatched socks and count how many people notice).

Parent Note: *Everyone is the star of their own movie, which means you are just an extra in theirs.*

37. The "Social Hangover" Cure

Best Used When

The day after a big event, your child is grumpy and fragile.

What This Helps With

- Recovery
- Predicting needs
- Reducing conflict

Plaintext

We have a big family event on Saturday. Predict the "Social Hangover" on Sunday. Give me a plan for Sunday that demands ZERO social performance (pajama day, safe foods, low lights) to help them recover.

Parent Note: *Respect the recovery time.*

38. The Non-Verbal Signal System

Best Used When

Your child goes mute (selective mutism) or shuts down when overwhelmed in public.

What This Helps With

- Communication under stress
- Safety
- Reducing pressure

Plaintext

My child shuts down and can't speak when anxious. Help us establish a hand signal system (e.g., Thumbs up = Okay, Flat hand = Need a break, Thumbs down = Emergency/Leave now) so they can communicate without words.

Parent Note: *When the voice leaves, let the hands speak.*

39. The "New Territory" Map

Best Used When

Starting a new school, club, or camp is causing panic.

What This Helps With

- Reducing fear of the unknown
- Preparation
- Visualization

Plaintext

My child is starting a new activity. Anxiety is high. Create a "Pre-Game Strategy." What can we look up online (photos of the venue, schedule)? What questions can we ask the leader beforehand to remove the unknowns?

Parent Note: *Anxiety thrives in the unknown. Fill the dark with data.*

40. The Pocket Scripts (Small Talk)

Best Used When

Your child freezes when someone says "How are you?" or "What's up?"

What This Helps With

- Reducing freezing
- Automating basics
- Confidence

Plaintext

My child hates small talk because they don't know what to say. Write 3 "Pocket Scripts" for: 1. Greeting ("Hi, I'm [Name]"). 2. Answering "How are you?" (Good, how are you?). 3. Exiting ("Nice to see you, bye!").

Parent Note: *Small talk is just the wrapper. You don't have to eat it, but you have to unwrap it to get to the candy.*

41. The Polite "No" Generator

Best Used When

Your child agrees to things they hate because they are scared to decline.

What This Helps With

- Boundaries
- Authenticity
- Preventing resentment

Plaintext

My child doesn't know how to say no to an invitation without feeling mean. Give me 3 polite scripts to decline an invite: 1. The Direct No. 2. The "Busy" No. 3. The "Not my thing" No.

Parent Note: *A polite 'no' is better than a resentful 'yes'.*

Section 6: Digital & Online Social Skills (The Screen)

Navigating friendship in the age of screens.

42. The "Tone Checker"

Best Used When

Your child sends blunt texts that sound angry (e.g., "Where are you") without realizing it.

What This Helps With

- Digital etiquette
- Preventing misunderstanding
- Softening language

Plaintext

My child sends texts that sound rude/angry. Teach them about "Digital Tone." Explain how adding an emoji or a softener word ("Hey," "Just wondering") changes the meaning of "Where are you."

Parent Note: *In text, kindness must be explicit because the face is missing.*

43. The Group Chat Survival Guide

Best Used When

Your child is spamming the group chat or getting upset by being left on read.

What This Helps With

- Digital boundaries
- Managing anxiety

- Not being "that kid"

Plaintext

My child is in their first Group Chat. List 5 "Golden Rules" of Group Chats (e.g., Don't spam, Don't expect instant replies, No heavy conversations in the group).

Parent Note: *A group chat is a cocktail party that never ends. It's okay to leave the room.*

44. The "Good Game" Protocol

Best Used When

Your child rages when losing video games or trash-talks opponents.

What This Helps With

- Sportsmanship
- Emotion regulation
- Online reputation

Plaintext

My child gets toxic when gaming online. Create a "Gamer's Code of Honor." Rules for: What to say when you lose ("GG"), What to say when you win (No gloating), and when to mute the mic.

Parent Note: *How you play matters more than the score.*

45. The "Online Stranger" Red Flags

Best Used When

Your child thinks everyone online is their friend.

What This Helps With

- Safety
- Digital literacy
- Critical thinking

Plaintext

I need to talk to my child about online safety without scaring them. Give me a list of "Red Flags" that an online friend might not be who they say they are (e.g., asking for photos, asking for address, trying to move to a private chat).

Parent Note: *The screen is a mask. Teach them to look behind it.*

46. The Reply Time Rule

Best Used When

Your child panics if a friend doesn't text back immediately.

What This Helps With

- Anxiety management
- Reality testing
- Patience

Plaintext

My child thinks their friend hates them because they haven't replied in 10 minutes. Help me explain "Asynchronous Communication." List 5 reasons someone might not reply (phone died, in shower, sleeping) that have nothing to do with my child.

Parent Note: *Silence is rarely a message. Usually, it's just silence.*

47. The "Grandma Test" for Posting

Best Used When

Your child wants to post questionable content or comments.

What This Helps With

- Digital footprint
- Impulse control
- Future protection

Plaintext

My child is starting to post on social media. Explain the "Grandma Test" (or "Billboard Test"). If you wouldn't want your Grandma to see it, or see it on a Billboard, don't post it.

Parent Note: *The internet is written in permanent ink.*

48. The Screenshot and Block Flow

Best Used When

Your child encounters bullying or something scary online.

What This Helps With

- Safety
- Empowerment
- Reporting

Plaintext

Teach my child the "Stop, Block, Tell" protocol for cyberbullying or weird interactions. 1. Don't reply. 2. Screenshot the evidence. 3. Block the user. 4. Show a parent.

Parent Note: *Don't feed the trolls. Block them.*

49. The Emoji Translator

Best Used When

Your child misinterprets emojis or uses them inappropriately.

What This Helps With

- Digital literacy
- Nuance
- Preventing embarrassment

Plaintext

My child is confused by emojis (or uses them wrong). Create a quick "Emoji Dictionary" for the top 10 most used emojis among teens/kids, explaining their *actual* slang meaning (e.g., the skull emoji means "I'm dying laughing," not death).

Parent Note: *Language evolves. Emojis are the new dialect.*

50. The Digital Sunset Negotiator

Best Used When

Getting off screens at night is a fight that ruins the day's social progress.

What This Helps With

- Sleep hygiene
- Boundaries
- Routine

Plaintext

We fight about turning off screens every night. Help us negotiate a "Digital Sunset" plan. Suggest a transition routine that bridges the gap from "High Dopamine Screen" to "Sleep" without a cliff-edge drop.

Parent Note: *Sleep is the foundation of all social skills.*

Bonus: System Customization Worksheet

1. Change the Persona

- *"Act as a cool older cousin giving advice..."*
- *"Act as a social skills detective..."*
- *"Act as a gentle mediator..."*

2. Adjust the Tone

- *"Be very direct and logical."*
- *"Use gaming metaphors (NPCs, quests, loot)."*
- *"Focus on empathy and feelings."*

3. The Repair Script

- *"My child felt this advice was 'fake.' Rework the script to sound more authentic and less like a robot or a teacher."*

4. Build Your Own Tool

- *"Act as [Role]. My child is struggling with [Social Situation]. They tend to [Specific Behavior]. Give me a strategy to help them navigate this without changing who they are."*
