

NAVIGATOR KIDS

EMBER'S VOLCANO NAVIGATOR

A Field Guide for Managing Big Energy

NAVIGATOR NAME: _____

DATE STARTED: _____

WARNING: This book belongs to a Dragon Trainer!

The Story of Ember

Meet Ember.

Ember is a Dragon with a heart of gold and a belly full of fire. Most of the time, Ember's fire is useful. It helps him fly fast and roast marshmallows.

*But sometimes, the fire gets **TOO BIG**.*

When things go wrong—like when his tower falls over or he has to stop playing—Ember's tummy rumbles. His face gets hot. The smoke starts to rise.

*It feels like a **VOLCANO** is about to explode!*

When the volcano blows, Ember roars loud and stomps his feet. He doesn't mean to be scary; he just has too much hot lava inside and nowhere to put it.

YOUR TURN:

Draw what your 'Volcano' looks like when it explodes. Is it messy? Loud? Hot?

Mission: Cool Down the Lava

Ember is about to explode! He needs a Navigator (YOU) to help him cool down.

STEP 1: PLAY THE GAME

Open 'Volcano Navigator' on the computer.

Help Ember spot the rumble, breathe, and squeeze.

Did you help Ember?

☐ YES! I noticed the rumble!

☐ YES! I cooled down the rock!

Now, let's learn how to cool down YOUR lava.

TOOL 1: SPOT THE RUMBLE

Volcanoes don't just explode. They rumble first. Your body rumbles too!

CHECK YOUR DASHBOARD:

■ HOT FACE?	☐ Yes
■ TIGHT HANDS?	☐ Yes
■ FAST HEART?	☐ Yes
■ CLENCHED TEETH?	☐ Yes

If you feel the rumble, it's time to use Tool 2!

TOOL 2: DRAGON BREATH

Fire needs air to burn. But gentle air cools it down.

THE COOLING BREATH:

■ SMELL THE FLOWER

■ Inhale... 1, 2, 3, 4

■ BLOW THE CANDLE

■■ Exhale... 1, 2, 3, 4

PRACTICE NOW:

Do 3 Dragon Breaths. Do you feel cooler?

[] Yes [] A little bit

TOOL 3: THE LEMON SQUEEZE

Sometimes the energy is stuck in your muscles. You have to SQUEEZE it out.

HOW TO DO IT:

1. Pretend you have lemons in your hands.

2. SQUEEZE them hard! Make lemonade! (Count 1-2-3).

3. DROP the lemons. Shake out your hands.

We turn from a Hard Rock into a Soft Ragdoll.

PARENT GUIDE

The Science of The Volcano

1. Interoception (The Rumble)

Neurodivergent kids often struggle to feel body signals until they are at a '10'. This guide helps them identify a '3' (Warm Face) so they can intervene early.

2. Co-Regulation

A child in a meltdown cannot calm down alone. Their logic brain is offline. They need you to lend them your calm. Do not ask questions; just model the breathing.

3. Progressive Muscle Relaxation (The Squeeze)

Anxiety stores physical tension. Squeezing and releasing manually 'resets' the nervous system from Fight/Flight to Rest/Digest.

NAVIGATOR POCKET KIT

Instructions: Cut these out and keep them in your pocket.

■ BODY CHECK

Face Hot?
Hands Tight?
Heart Fast?

Use a Tool!

❄️ ■ COOL DOWN

1. Smell Flower ■
2. Blow Candle ■■
3. Squeeze Lemons ■

MASTER VOLCANO NAVIGATOR

This certifies that

**Has learned to listen to their
body
and cool down the fire.**

"I am the Boss of my Brain!"
